

Instruction Manual

1092 Hot Tap™ Bulk Propane Tank Kit
(propane tank and Hot Tap™ Shower not included)

Read Directions Before Operating
Follow Directions at all Times

FOR YOUR SAFETY

If you smell gas:

1. Do not attempt to light the appliance.
2. Extinguish any open flame.
3. Disconnect from fuel supply.

FOR YOUR SAFETY

Do not store or use gasoline or other liquids with flammable vapors in the vicinity of this or any other appliance.

DANGER CARBON MONOXIDE HAZARD

Operating this item in an enclosed space can kill you. Never use this appliance indoors or in an enclosed space such as a camper, tent, car, boat or home.

DANGER CARBON MONOXIDE HAZARD

This appliance can produce carbon monoxide which has no odor and can kill you. Use only outdoors in well ventilated area.

FOR OUTDOOR USE ONLY

DIRECTIONS - FOLLOW THESE DIRECTIONS AT ALL TIMES

Read, understand and follow the instructions printed in this instruction manual, on shower and on propane cylinder before operating this product. Failure to comply with all instructions can result in serious bodily injury, death and/or property loss. CARBON MONOXIDE HAZARD - Operating this item in an enclosed space can kill you. Never use this appliance indoors or in an enclosed space such as a camper, tent, car, boat or home. Zodi assumes no responsibility for improper use. These directions may refer to options not included on your model. Keep children & pets away from product when operating. Water must be flowing from showerhead when igniting and whenever heater is on.

CAUTION

DO NOT OPERATE INDOORS. FOR OUTDOOR USE ONLY.

Propane products emit carbon monoxide and can kill you. Never use in enclosed space.

This package contains:

- Support Bracket
- "T" bolt
- Propane hose with propane tank connection
- (Propane tank not included)
- (Zodi Shower sold separately)

STEP 1

Select flat, well ventilated area outdoors 15ft (5M) away from tents, vehicles & flammable material. Position and secure propane tank on solid and stable ground. Ensure tank will not tip over.

STEP 2

Place the Hot Tap™ upside down so it is resting on its top. Position support bracket so the large hole lines up with the propane valve on the Hot Tap™. Ensure the "T" Bolt on the support bracket is on the same side as the Hot Tap™ propane knob.

STEP 3

Insert the propane hose connection through the large hole in the support bracket. Firmly and completely tighten the propane hose connections into the Hot Tap™ propane valve. To ensure proper fit, use pliers to tighten the propane hose connections to the Hot Tap™ propane valve until snug tight. The Hot Tap™ will still be slightly loose on support bracket even with the connection being tight.

STEP 4

Position the Hot Tap™ and support bracket so the support bracket extends below the Hot Tap™ and points toward the ground. Position the Hot Tap™ and support bracket so that the slit in the bottom of the support bracket slides over the collar on top of the propane tank. Ensure the "T" bolt is facing out and away from the propane tank valve. Firmly tighten "T" bolt so that the support bracket and Hot Tap™ are securely attached to the propane tank.

STEP 5

Connect the propane hose to the valve on the propane tank by turning the finger knob on the propane hose counter-clockwise into propane tank valve. Finger tighten. It may be necessary to reposition support bracket on propane tank collar to get better alignment for a better fitting between the propane hose connection and propane tank valve. Test for gas leaks - see "Test For Gas Leaks" section.

STEP 6

Once no propane leaks are present, turn on propane tank and follow instructions for using the Hot Tap HP™. Water must be flowing from showerhead when igniting and whenever heater is on. Turn propane tank valve "OFF" or "CLOSED" when not in use.

TEST FOR GAS LEAKS:

To ensure safety, test for leaks before using shower. Never use flame to check for leaks. With propane tank valve turned completely off, propane knob on shower turned completely off, propane tank connected to the propane hose and propane hose connected to shower, apply soapy water (1 part liquid detergent to 3 parts water) around area where the propane hose connects to the shower propane valves and also where the propane hose connects to the propane tank. Bubbles near propane connection indicate leaks. If bubbles are present, ensure the propane connection is not crossthreaded. Check that propane cylinder connection is tight. Repeat process (test for leaks) until no leaks are present. If leaks persist, do not use product, but contact Zodi.

REMOVING PROPANE FROM UNIT:

Only attach or detach propane and gas cylinder outdoors, away from flames and ignition sources, after the heater has cooled completely. To remove propane, remove propane hose from propane tank. Remove support bracket from collar of propane tank by untwisting "T" bolt. Remove hose from Hot Tap™ until fully removed from shower. Replace protective cap on propane tank. Store propane outdoors. Read manufacturer's directions on propane cylinder for other warnings.

STORAGE

Allow system to cool completely before handling or storing. Disconnect hose from propane tank and shower when not in use. Always store propane outdoors.

WARNINGS AND CAUTIONS

FOR OUTDOOR USE ONLY! Do NOT use indoors or in confined areas. Do NOT operate inside a tent or RV. Do NOT pre-heat system. Do not obstruct or restrict the flow of air for combustion.

Propane must be in a vertical position and safely anchored to firm flat ground when heating. Do not connect to remote gas supply. Always disconnect from propane tank before transporting and storing.

Allow heater to cool before handling, transporting and storing. Do not place any items including towels, soap or shampoo on or near heater. Keep children and pets clear when operating. Do not leave system unattended when operating

System not designed to heat water over 100°F. System not designed to heat water for consumption.
